

CLICKFLEX[®] PROTECTIVE COVER

CLICK AND PROTECT

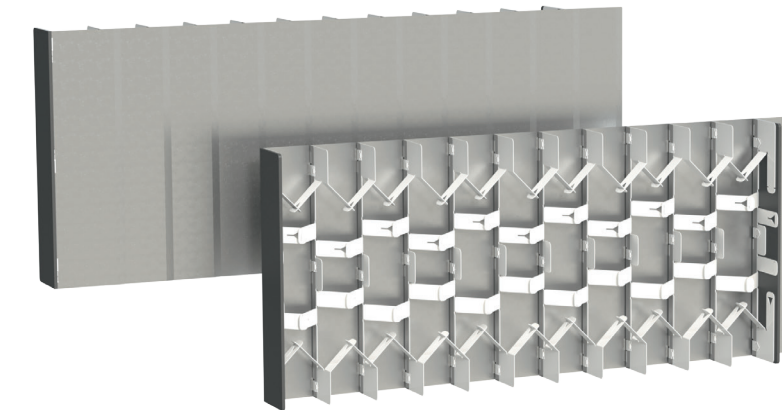

Dynamic. Different. Dedicated.

CLICKFLEX® PROTECTIVE COVER

HIGHLIGHTS

-  Pluggable, no tools needed
-  Block size per lamella < 2 mm
-  Lightweight
-  Low maintenance and durable
-  Uniform running behaviour even in compressed state
-  Following the Cradle to Cradle principle, disassembled components can be returned to the technical cycle

PRODUCT DESCRIPTION

The pluggable lamellas of the machine protective cover CLICKFLEX® allow a quick and easy installation without tools in your machine. The small block size of < 2 mm per lamella and the resulting low space requirement of the cover in the machine allows machine tools to be built more compactly. Therefore, resources, space and costs can be saved.

CLICKFLEX® offers very smooth running despite its compact block dimensions. Even in the compressed state, the springback force of the machine protective cover is very low as there is a balanced ratio between the compressive and tensile forces.

In the design phase of CLICKFLEX®, the focus was set on sustainability. Therefore, disassembled individual components can be returned to the technical cycle following the Cradle to Cradle principle.
